Art Unit: 1761

Restriction to one of the following inventions is required under 35 U.S.C. 121:

I. Claims 1-12, drawn to an emulsifier, classified in class 426, subclass 654

II. Claim 13***, drawn to another emulsifier, classified in class 426, subclass 654.

III. Claims 14-30, drawn to the process of making potato ingredients, classified in class 426, subclass 637.

IV. Claims 32-33, drawn to a dough composition, classified in class 426, subclass 549.

V. Claims 31,34-37, drawn to the starch ingredient, classified in class 426, subclass 578.

Within Groups III and V, an election of species is required. The species are the polyglycerol ester, the DATEM, a mixture of polyglycerol ester and DATEM.

Invention I and II are unrelated and independent because the two emulsifier systems are different.

Inventions I & II and III are related as product and process of use. The inventions can be shown to be distinct if either or both of the following can be shown: (1) the process for using the product as claimed can be practiced with another materially different product or (2) the product as claimed can be used in a materially different process of using that product (MPEP § 806.05(h)). In the instant case, the product as claimed can be used in a materially different process of using that product such as in a process of making an emulsion.

Art Unit: 1761

Inventions I & II and V are related as combination and subcombination.

Inventions in this relationship are distinct if it can be shown that (1) the combination as claimed does not require the particulars of the subcombination as claimed for patentability, and (2) that the subcombination has utility by itself or in other combinations (MPEP § 806.05(c)). In the instant case, the combination as claimed does not require the particulars of the subcombination as claimed because the combination does not require an emulsifier system having the polyglycerol, fatty acid ester, and materials of the combination. The subcombination has separate utility such as an aqueous emulsion.

Inventions IV and V are related as combination and subcombination. Inventions in this relationship are distinct if it can be shown that (1) the combination as claimed does not require the particulars of the subcombination as claimed for patentability, and (2) that the subcombination has utility by itself or in other combinations (MPEP § 806.05(c)). In the instant case, the combination as claimed does not require the particulars of the subcombination as claimed because the dough does not require the emulsifier system of Invention V. The subcombination has separate utility such as making food powder.

Inventions III and V are related as process of making and product made. The inventions are distinct if either or both of the following can be shown: (1) that the process as claimed can be used to make other and materially different product or (2) that the product as claimed can be made by another and materially different process

Art Unit: 1761

(MPEP § 806.05(f)). In the instant case, the product as claimed can be made by another and materially different process such as extraction.

Because these inventions are distinct for the reasons given above and the search required for Group I is not required for Groups II, III, IV and V and have acquired a separate status in the art because of their recognized divergent subject matter, restriction for examination purposes as indicated is proper.

Applicant is reminded that upon the cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 CFR 1.48(b) if one or more of the currently named inventors is no longer an inventor of at least one claim remaining in the application. Any amendment of inventorship must be accompanied by a request under 37 CFR 1.48(b) and by the fee required under 37 CFR 1.17(i).

Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).
